

I. Explain Parfit's goal

- A. Argue Bundle Theory is correct
- B. Present the implications Bundle Theory has for human persons

II. Explain the rival theories

A. Ego Theory

- 1. What unites experiences is a single person
- 2. Give versions of Ego Theories
 - a. _____
 - b. _____
- 3. Use example of person "driving" the body from a control in the head as an illustration.
- 4. Give examples ordinary expressions that illustrate that we often assume E.T. is correct

B. Bundle Theory

- 1. What unites experiences is causal connections
 - a. Explain causal connections at a moment (i.e. different experiences at a moment)
 - b. _____
- 2. Point out some of the weird consequences of Bundle Theory
 - a. there is no "me" that survives.

III. Teletransporter/Part Replacement

A. Explain how the teletransporter works

- 1. Motivate the intuition that I don't survive the transporter
- 2. Explain why the notion of survival here relies on the Ego Theory

B. Explain how the part replacement room works

- 1. Point out the three common-sense intuitions that Parfit employ
 - a. _____
 - b. _____
 - c. _____

C. Leads to unwanted conclusion that there is a critical % that goes from me to duplicate

- 1. No evidence for what % could matter
 - a. No evidence means none or right? [don't like this interpretation]
 - b. No evidence probably means there's nothing to have evidence of.
- 2. Implausible that $x\%$ part replacement is me, but $(x + 1)\%$ is a duplicate.
 - a. Give bad version of this argument (e.g. fetus argument)
 - b. Explain why this isn't the bad version

D. Ego theory gave us the assumptions that led to unwanted conclusions, so BT is true

- 1. Give implications of bundle theory
 - a. _____
 - b. _____
 - c. _____
